Diwali festival from a scientific perspective

A funeral for the son of the soil [1]

How did this earth come into being?

How did the land form on it?

How did the sea form on it?

How did living things appear on it?

---

A scientist named **Iranyakshatha** studied the "formation of earth" forty Chatur-yugas ago, that is, about 100 million years ago. For this study, the vast land area of the earth and every part of the deep sea had to be examined in detail. For this, Iranyakshatha needed more laboratories. More researchers were also needed. All this required a lot of money.

So he beat and tortured the rich people called **Gods**, enslaved them, and robbed of their wealth. He used all the enslaved Gods for his fieldwork. He spent all their wealth on his research. For his research, Iranyaksha established huge laboratories on the coastal areas of the earth and on the largest mountain ranges, and studied how the land was thirty to forty kilometers below the ground.

This caused the roots of the land at the points where the sea and land met to shake. A major earthquake occurred and the huge land plates on the surface of the earth rolled

up like mats and sank into the sea. Knowing that this world was heading towards destruction, all the scientists called **'Iridikal@Rishi'** got together and studied this entire event by combining all the satellite images on a 'super' computer using AI technology. They converted the research results into films and screened them. The landscape appeared flat as if a mat had been spread over a large pool of water. Then the mat rolled up and gradually sank into the water. In that scene, it was possible to see the huge land masses on the earth rolling up and going into the sea on the earth.

Iridikal and the Gods got together and decided to stop this research of Iranyaksha. This research that was causing destruction to all life on the world, and it must be stopped. For this, Iranyaksha should be immediately imprisoned and executed. There was no other way but to do this. The land that was sinking in the sea had to be brought back above the sea and the earth had to be saved from this disaster.

For this, they went to the king named **Maha-Vishnu**, who was ruling the earth at that time, and appealed to him. King Maha-Vishnu, in order to save his people and the land, consulted with scientists named **Iridikal** and wealthies named **Devars**. The Iridikal told Maha-Vishnu that the land was shaking and sinking into the sea because the Iranyaksha had dug huge holes deep under the earth where the continental plates met.

They also said that there was no other way to prevent this except by supporting the edges of the continents (under the oceans). King Maha-Vishnu immediately declared Iranyakshata as an enemy of this world. He announced that Iranyakshata would be arrested and given the death penalty.

To fulfill his order, the king of the earth, Maha-Vishnu, went to the largest laboratory under the sea, thirty to forty kilometers below and met with Iranyaksha from there. At the end of the battle, Iranyaksha, who had disappeared into the depths of the sea, died. King Maha-Vishnu was victorious.

Having defeated Iranyaksha, Maha-Vishnu immediately created huge long pillars with the help of those huge laboratories under the sea. He supported those pillars on the edges of the submerged land area and brought the land areas back above sea level. As a result, new mountain ranges of the Alps appeared on the surface of the earth. The coastal areas of the land came up from the sea.

The entire event was analyzed by combining all the satellite images on a ‘super’ computer using AI. When they were viewed on a screen, it looked like a Pig (JCB) was lifting Continents with its mouth.

The landscape, which had previously been flat like a mat, now appeared torn and fragmented in places. The Alps, the Himalayas, the Indian Satpura Mountains and the Caspian Sea had appeared a new.

The once-united landmass was now torn apart and transformed into Africa, Europe, Asia, and the Americas, and began to drift away from each other.

But “when a good thing perishes, a bad thing is born”! While the earth was recovering from a great destruction, a disaster occurred. Even the great God Maha-Vishnu could not prevent that disaster. A poisonous waste material that could destroy life appeared inside the laboratory set up in the shape of a Pig.

Scientists could not destroy it. They named that waste as **‘Naran’**. The Naran began to harm and destroy life with its monstrous nature. In order to protect the Gods, the great king Maha-Vishnu buried that Naran under the earth.

The day when the demonic substance called Naran, which had emerged from the earth, was destroyed by the earth is celebrated as an annual festival by the living beings on earth, humans, gods, and gods.

On Diwali, everyone wakes up early in the morning and takes a bath in the Ganga water between 3 and 4.30 am, then wears new clothes, eats sweets and celebrates the day when this earth and its territories were saved.

I kindly request all the people of the world to wear new clothes, light lamps and eat sweets to celebrate the day when Naran, the Asura died and the day when the Earth "Bhoo-Devi" was saved.

May the darkness be gone.

May the light be filled in the hearts and feelings.

Happy Deepavalli,
